It is the part of wisdom to plant gardens extensively this year for health and economy and for defense. The supply of vegetable seeds is less this year than it has ever been since The Inland Seed Company has been in business and it is impossible to secure a further supply from Europe. Shortage is especially noticeable in carrots and onions. The Inland Seed Company has usually continued to sell throughout the season at quotations made in the spring catalog. This year, however, they are not guaranteeing prices or supplies. The ordinary vegetables are easily grown and are much better in quality than those secured from the local market. Order early and be sure of receiving your requirements.
